## **Introduction**

This document is about the “Mojab” system project. This application is a complaint management system. In this document, we cover 5 phases, Describing the Information System to be developed, ER/EER Modelling, Designing Database and Normalization, Creating Tables using Oracle 10g and Meeting the Specification.

## **Description of the Organization**

Mojab in Arabic means answered, respondent and considered. This system was created for Prince Sultan University in Riyadh, which is a private, non-profit university that provides study in many important programs. Based on the university's goals to respond to students and employees and raise the quality of the educational level and the satisfaction of students and employees with the services provided to them, this system was created. The system allows students and employees to raise complaints related to the university, direct them to departments, respond to users as quickly as possible, and evaluate their satisfaction. The need for this application came with the recent increase in the number of students and employees, which makes the traditional way -the manual way- to address complaints more difficult and takes a longer time. Also, the student or employee may not know who is responsible for addressing this complaint or which department it relates to. However, with an application that assigns complaints to the departments according to their responsibilities, this will save effort and time instead of the traditional way of filing and tracking the complaints. In addition, this application provides a greater advantage and meets

the university's need to know the most prominent difficulties that students and employees face. Using this application makes it easier for the university to gather statistics for complaints, classify them, and review them to develop the level of service provided, raise the quality of the university, and achieve part of the university's mission, which aims to integrate modern technologies to enhance productivity and serve beneficiaries.

## **Description of the purpose and scope of the IS**

This application is limited to students and employees of Prince Sultan University in Riyadh. The purpose of this application is to increase the quality and speed of response to the problems and requests of employees and students. This application enhances the service automation system. Instead of the difficulty of physical visits to department heads and officials, this system came to speed up and organize the way to raise complaints and respond to them. A variety of interfaces is provided for each of these categories:

### **The User view:**

- Login and Signup page.
- Personal Information page.
- Page with 3 options ( Previous complaints, Add a new complaint and Track a complaint).
- Page to add a new complaint which included (Write your complaint, Type of complaint, Complaint level and Upload an attachments).
- Page to see the complaint state and the expected time to solve the problem.
- The satisfaction page (when the complaint is closed).

### **The Administrator view:**

- Login and Signup page.
- A dashboard that shows all the complaints.
- A page to control and manage the complaints states and due dates.
- A page to assigns the complaint to the appropriate department and to show who assigns the complaints to the departments

### **The Department view:**

- Login and Signup page.
- A dashboard to see all complaints and solve them.

## **Functional System Requirements:**

### **User :**

- The system will allow the users to register with PSU ID, email, phone number and their own password.
- The system then will verify the registration and each login process by sending an OTP to the user phone number(It will not be implemented in this project).
- The system will provide each user a personal profile.
- The system will allow the user to write the complaint.
- The system will make the student choose the desired department.
- The system will notify the user that the complaint was received.
- The user will be able to check the complaint state all the time.
- After receiving the reply from the department, the system will provide a page to rate the service.

### **Administrator :**

- The system will provide the administrator with the ticket.
- The administrator will analyze the complaint.

- The administrator will send the ticket to the desired department.

### **Department:**

- The department head will receive the ticket from the administrator.
- The department head will assess the complaint and solve the problem.
- Then the department will notify the administrator that the problem is solved.
- If the user is not satisfied the department will receive the problem again and check it.

## **Non-Functional System Requirements :**

### **1- Performance and Scalability:**

- The system shall function normally no matter how many users are accessing the system at the same time.
- The response time of any operation the user requests or the page loads should not take more than 5 seconds.
- The system should have a strong recovery plan if there are any lagging or blocking problems.

### **2- Usability:**

- From the first time, the system should be easy to use and remember.
- Accessing all the program functions within the interface should be obvious to the user.

### **3- Security:**

- The system should allow access to the authorized people only.
- A verification number with each login or signup process.
- Using VPN which include strong encryption algorithms to ensure the highest level of security within the connection and network.

- The passwords must be strong and unguessable.

#### **4- Extensibility and maintainability:**

- The mean time to restore the system “MTTRS” after any failure should not take more than 10 minutes.
- Adding new features to the existing system should not affect the whole system.

#### **5- Reliability:**

- During support access the downtime of the system should be no more than 15 minutes per 30 days.

### **Data Requirements**

#### **a. Scenario:**

1. The user can be either a student or employee, which all inherit from the User. Users are distinguished by their User\_ID. Users are also identified by Email, Password, Phone and Name. The name is composed of first name and last name.
2. Students are distinguished by User\_ID. Students are also identified by Student\_ID, Student\_major and Academic\_level.
3. Employees are distinguished by User\_ID. Employees are also identified by Employee\_ID, Job\_position and Rank.
4. Administrators are distinguished by Admin\_ID, Email and Password.
5. Departments are distinguished by Departments\_ID. Departments are identified by Department\_Name, Email and Password.

6. An employee works in one department. A department has many employees working in it.
7. An employee may manage one department and one department must have one employee who manages the department.
8. Complaints are distinguished by Complaint\_ID. Complaints are identified by Complaint\_Type, Complaint\_Text, Status, Complaint\_level.
9. A complaint may be related to one or many locations. A Location is described by the Location\_ID, BuildingNum, RoomNo, FloorNumber, Type of location such as classroom, computer labs, offices, student lounge, library, meeting rooms etc.. A location may be shown in many complaints.
10. The user files a complaint. The user can file any number of complaints. A complaint is filed by one user. The date of a complaint is recorded.
11. The administrator assigns the complaint to the department depending on the type of the complaint. The date of assignment is recorded, and the Department will add the solved date .
12. The department will address the complaint. The department will add date\_solved and status of the complaint is updated. It can be solved, cannot be solved, in progress.
13. After the complaint is closed, the user can fill out the complaint satisfaction rate and comments.

## b. Entity Definition Table

Entity	Description		Identifier	Attribute
User	Basic entity contains information about all PSU users that are using the application (Student and employee)		User_ID	User_ID Email Password Phone Name (F_name, L_name)
Student	Inherited entity, it will contain information from the user in addition to student ID, major, academic level		User_ID	User_ID Student_ID Student_major Academic_level
Employee	Inherited entity that will receive information from the user in addition to employee ID, job position and rank		User_ID	User_ID Employee_ID Job_position Rank Email Password
Administrator	An entity that controls complaints filed by the		Admin_ID	Admin_ID Email Password

Entity	Description		Identifier	Attribute
	user and assigns them to the departments			
Department	An entity representing the departments in the PSU that address complaints		Department_ID	Department_ID Department_Name
Complaint	An entity that represents the complaint filed by the user		Complaint_ID	Complaint_ID Status Complaint_Type Complaint_Text Complaint_level
Location	An entity that represents a location for the complaint		Location_ID	Location_ID BuildingNum RoomNo FloorNumber Location_Type

**c. Relation Definition Table:**

Relationship Name	Type	Attributes	Entities	Description
IS-A	1:1 Parent-child single inheritance relationship Disjoint, TP		User, Student Employee	The user can be either a student or employee or an administrator
Files	Binary, 1:N, TP:PP	Complaint_Date	User and Complaint	This relationship allows "user" to be linked with "Complaint" to file a complaint, complaint date is recorded when the user files it
Assigns	Tertiary, 1:N:1, TP,TP,PP	Assignment_Date Date_Solved	Administrator, Complaint and Department	This relationship allows "Department" to be linked with "Complaint" by the "Administrator", the date of assignment is recorded and

Relationship Name	Type	Attributes	Entities	Description
				department will add the solved date
Fill out	Binary, 1:N,PP:PP	Comments Satisfaction _ Rate	User and Complaint	This relationship allows “Complaint” to be evaluated by the “User”, user can fill out the complaint satisfaction rate and comments for the complaint
Works	Binary, N:1,TP:TP		Employee and Department	This relationship allows “Employee” to be linked with “Department”
Managed by	Binary, 1:1,PP:TP		Employee and Department	This relationship allows “Employee” to manage the “Department”
Related	Binary, N-1,PP:TP		Complaint and Location	This relationship allows “Complaint”

Relationship Name	Type	Attributes	Entities	Description
				to be related to “Location”

**d. Attribute Definition Table:**

Entity Name	Attribute	Type	Description
User	User_ID	Simple Key Attribute	The identification number assigned to the user
	Email	Simple Attribute	The email assigned to the user
	Password	Simple Attribute	The password chosen by the user to log in
	Name (F_name, L_name)	Composite Attribute	The full name for the user
	Phone	Simple Attribute	Phone number that is registered with the user account
Student	Student_ID	Simple Key Attribute	The identification number assigned to PSU students
	Student_major	Simple Attribute	The major of the student
	Academic_level	Simple Attribute	Academic level for the student

Entity Name	Attribute	Type	Description
Employee	Employee_ID	Simple Key Attribute	The identification number assigned to PSU employees
	Job_position	Simple Attribute	Job position of the employee
	Rank	Simple Attribute	Rank of the employee in PSU
Department	Department_ID	Simple Key Attribute	The identification number assigned to PSU departments
	Department_Name	Simple Attribute	Department name in psu
	Email	Simple Attribute	The email assigned to the department
	Password	Simple Attribute	The password chosen by the department to log in
Administrator	Admin_ID	Simple Key Attribute	The identification number assigned to Mogab Administrator
	Email	Simple Attribute	The email assigned to the administrator
	Password	Simple Attribute	The password chosen by the administrator to log in
	Complaint_ID	Simple Key	The identification

Entity Name	Attribute	Type	Description
Complaint		Attribute	number assigned for each complaint
	Status	Simple Attribute	The status of the complaint
	Complaint_Type	Simple Attribute	The type of the complaint (financial, academic, resources, facilities)
	Complaint_Text	Simple Attribute	Text of the complaint and attachments
	Complaint_level	Simple Attribute	Classification of the complaint as whether it is important and urgent or not
Location	Location_ID	Simple Key Attribute	The identification number assigned for each location
	BuildingNum	Simple Attribute	Building Number at PSU
	RoomNo	Simple Attribute	Room Number at PSU
	FloorNumber	Simple Attribute	Floor Number at PSU

Entity Name	Attribute	Type	Description
	Location_Type	Simple Attribute	Location type such as; classroom, computer labs, offices, student lounge, library, meeting rooms

## **Identity relevant clauses from the IEEE and ACM Professional Code of Ethics in database analysis :**

### **IEEE code of ethics:**

- To avoid unlawful conduct in professional activities.
- To treat all persons fairly and with respect.
- To support colleagues and co-workers in following this code of ethics.
- To maintain and improve our technical competence.
- To seek, accept, and offer honest criticism of technical work.
- To prioritize the safety, health, and welfare of the public.
- To Avoid deceptive acts.

### **ACM code of ethics:**

#### **1. General Ethical Principles**

1.1 Contribute to society and to human well-being, acknowledging that all people are stakeholders in computing.

1.2 Avoid harm.

1.3 Be honest and trustworthy.

1.4 Be fair and take action not to discriminate.

1.6 Respect privacy.

1.7 Honor confidentiality.

## **2. Professional Responsibilities**

2.1 Strive to achieve high quality in both the processes and products of professional work.

2.2 Maintain high standards of professional competence, conduct, and ethical practice.

2.3 Know and respect existing rules pertaining to professional work.

2.8 Access computing and communication resources only when authorized or when compelled by the public good.

2.9 Design and implement systems that are robustly and usably secure.

## **3. Professional Leadership Principles**

3.2 Articulate, encourage acceptance of, and evaluate fulfillment of social responsibilities by members of the organization or group.

3.3 Manage personnel and resources to enhance the quality of working life.

3.4 Articulate, apply, and support policies and processes that reflect the principles of the Code.

3.5 Create opportunities for members of the organization or group to grow as professionals.

## **4. Compliance with The Code**

4.1 Uphold, promote, and respect the principles of the Code.

4.2 Treat violations of the Code as inconsistent with membership in the ACM.

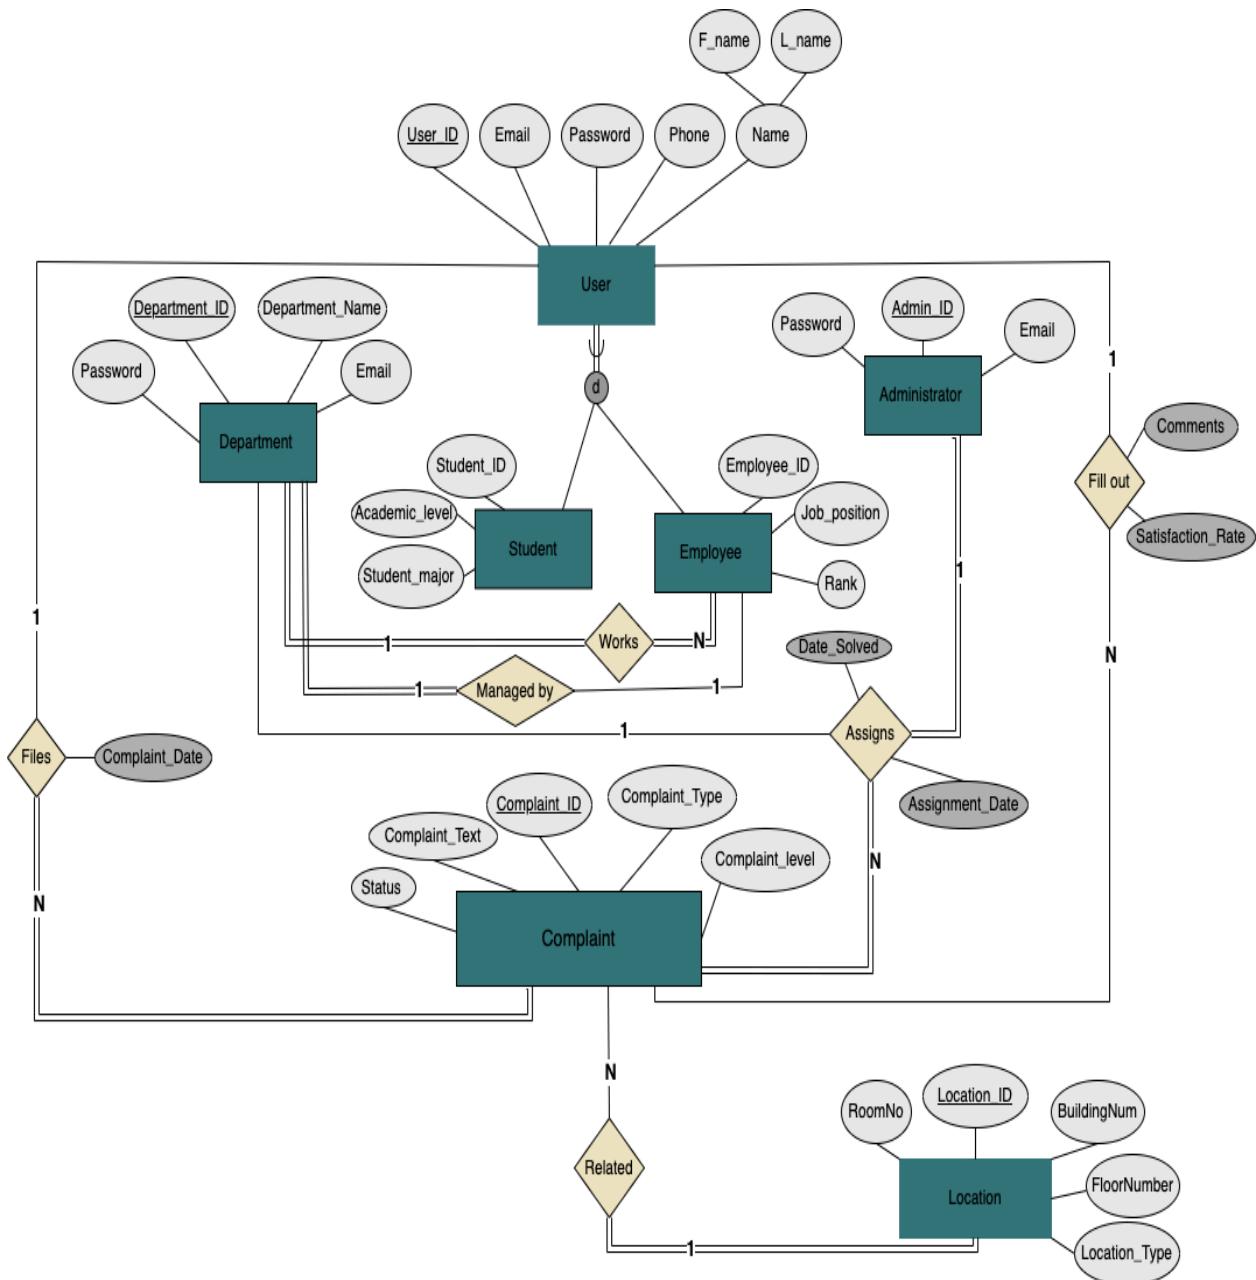

## **Contribution of the team members to phase 1 and strategy used to demonstrate teamwork :**

<b>Dana</b>	<b>Functional System Requirement</b> <b>Non-Functional</b> <b>System Requirements</b> <b>Identify relevant clauses from the IEEE and ACM Professional Code of Ethics in database analysis</b>
<b>Lama</b>	<b>Description of the Organization</b> <b>Description of the purpose and scope of the IS</b> <b>Data Requirements</b>

# **Phase 2**

## **ER/EER Modeling**

## EER Diagram:

## **Business Rules:**

- 1- The user password must be at most 10 characters including a lowercase letter, uppercase letter, and numbers.
- 2- The user id must be at most 10 characters.
- 3- One user can upload complaints an infinite number of times.
- 4- Many complaints will be assigned by one administrator to one or many departments.
- 5- One department will have many complaints.
- 6- One department has many workers.
- 7- One user can evaluate many complaints.
- 8- The user must see the complaint state.
- 9- One complaint could have many locations or not.

## **Identity relevant clauses from the IEEE and ACM Professional Code of Ethics in database analysis :**

### **IEEE code of ethics:**

- To avoid unlawful conduct in professional activities.
- To treat all persons fairly and with respect.
- To support colleagues and co-workers in following this code of ethics.
- To maintain and improve our technical competence.
- To seek, accept, and offer honest criticism of technical work.
- To prioritize the safety, health, and welfare of the public.
- To Avoid deceptive acts.

## **ACM code of ethics:**

### **1. General Ethical Principles**

- 1.1 Contribute to society and to human well-being, acknowledging that all people are stakeholders in computing.
- 1.2 Avoid harm.
- 1.3 Be honest and trustworthy.
- 1.4 Be fair and take action not to discriminate.
- 1.6 Respect privacy.
- 1.7 Honor confidentiality.

### **2. Professional Responsibilities**

- 2.1 Strive to achieve high quality in both the processes and products of professional work.
- 2.2 Maintain high standards of professional competence, conduct, and ethical practice.
- 2.3 Know and respect existing rules pertaining to professional work.
- 2.8 Access computing and communication resources only when authorized or when compelled by the public good.
- 2.9 Design and implement systems that are robustly and usably secure.

### **3. Professional Leadership Principles**

- 3.2 Articulate, encourage acceptance of, and evaluate fulfillment of social responsibilities by members of the organization or group.

## Relational Model:

## **Identity relevant clauses from the IEEE and ACM Professional Code of Ethics in database design:**

### **IEEE code of ethics:**

- To avoid unlawful conduct in professional activities.
- To treat all persons fairly and with respect.
- To support colleagues and co-workers in following this code of ethics.
- To maintain and improve our technical competence.
- To seek, accept, and offer honest criticism of technical work.
- To prioritize the safety, health, and welfare of the public.
- To Avoid deceptive acts.

### **ACM code of ethics :**

#### **Principle 1: PUBLIC**

- 1.01. Accept full responsibility for their own work.
- 1.02. Moderate the interests of the software engineer, the employer, the client and the users with the public good.
- 1.03. Approve software only if they have a well-founded belief that it is safe, meets specifications, passes appropriate tests, and does not diminish quality of life, diminish privacy or harm the environment. The ultimate effect of the work should be to the public good.
- 1.06. Be fair and avoid deception in all statements, particularly public ones, concerning software or related documents, methods and tools.
- 1.07. Consider issues of physical disabilities, allocation of resources, economic disadvantage and other factors that can diminish access to the benefits of software.
- 1.08. Be encouraged to volunteer professional skills to good causes and contribute to public education concerning the discipline.

## **Principle 2: CLIENT AND EMPLOYER**

- 2.03. Use the property of a client or employer only in ways properly authorized, and with the client's or employer's knowledge and consent.
- 2.04. Ensure that any document upon which they rely has been approved, when required, by someone authorized to approve it.
- 2.07. Identify, document, and report significant issues of social concern, of which they are aware, in software or related documents, to the employer or the client.
- 2.08. Accept no outside work detrimental to the work they perform for their primary employer.
- 2.09. Promote no interest adverse to their employer or client, unless a higher ethical concern is being compromised; in that case, inform the employer or another appropriate authority of the ethical concern.

## **Principle 3: PRODUCT**

- 3.01. Strive for high quality, acceptable cost and a reasonable schedule, ensuring significant tradeoffs are clear to and accepted by the employer and the client, and are available for consideration by the user and the public.
- 3.02. Ensure proper and achievable goals and objectives for any project on which they work or propose.
- 3.03. Identify, define and address ethical, economic, cultural, legal and environmental issues related to work projects.
- 3.07. Strive to fully understand the specifications for software on which they work.
- 3.08. Ensure that specifications for software on which they work have been well documented, satisfy the users' requirements and have the appropriate approvals.
- 3.13. Be careful to use only accurate data derived by ethical and lawful means, and use it only in ways properly authorized.
- 3.14. Maintain the integrity of data, being sensitive to outdated or flawed occurrences.
- 3.15. Treat all forms of software maintenance with the same professionalism as new development.

## **Principle 4: JUDGMENT**

- 4.01. Temper all technical judgments by the need to support and maintain human values.
- 4.02 Only endorse documents either prepared under their supervision or within their areas of competence and with which they are in agreement.
- 4.03. Maintain professional objectivity with respect to any software or related documents they are asked to evaluate.
- 4.04. Not engage in deceptive financial practices such as bribery, double billing, or other improper financial practices.
- 4.05. Disclose to all concerned parties those conflicts of interest that cannot reasonably be avoided or escaped.

## **Principle 5: MANAGEMENT**

- 5.02. Ensure that software engineers are informed of standards before being held to them.
- 5.03. Ensure that software engineers know the employer's policies and procedures for protecting passwords, files and information that is confidential to the employer or confidential to others.
- 5.04. Assign work only after taking into account appropriate contributions of education and experience tempered with a desire to further that education and experience.
- 5.07. Offer fair and just remuneration.
- 5.08. Not unjustly prevent someone from taking a position for which that person is suitably qualified.
- 5.11. Not ask a software engineer to do anything inconsistent with this Code.
- 5.12. Not punish anyone for expressing ethical concerns about a project.

## **Principle 6: PROFESSION**

- 6.01. Help develop an organizational environment favorable to acting ethically.
- 6.04. Support, as members of a profession, other software engineers striving to follow this Code

- 6.06. Obey all laws governing their work, unless, in exceptional circumstances, such compliance is inconsistent with the public interest.
- 6.07. Be accurate in stating the characteristics of software on which they work, avoiding not only false claims but also claims that might reasonably be supposed to be speculative, vacuous, deceptive, misleading, or doubtful.
- 6.10. Avoid associations with businesses and organizations which are in conflict with this code.

### **Principle 7: COLLEAGUES**

- 7.01. Encourage colleagues to adhere to this Code.
- 7.02. Assist colleagues in professional development.
- 7.03. Credit fully the work of others and refrain from taking undue credit.
- 7.08. In situations outside of their own areas of competence, call upon the opinions of other professionals who have competence in that area.

### **Principle 8: SELF**

- 8.02. Improve their ability to create safe, reliable, and useful quality software at reasonable cost and within a reasonable time.
- 8.03. Improve their ability to produce accurate, informative, and well-written documentation.
- 8.04. Improve their understanding of the software and related documents on which they work and of the environment in which they will be used.
- 8.05. Improve their knowledge of relevant standards and the law governing the software and related documents on which they work.
- 8.07 Not give unfair treatment to anyone because of any irrelevant prejudices.
- 8.08. Not influence others to undertake any action that involves a breach of this Code.
- 8.09. Recognize that personal violations of this Code are inconsistent with being a professional software engineer.

1 rows returned in 0.02 seconds Download

-Display the record for a specific user

```
SELECT*  
FROM SatisfactionRate_FillOut  
WHERE user_ID = '22144926305';
```

-Display the complaint ID for complaints with a complaint level High

```
SELECT complaint_id
From complaint
where complaint_level = 'High';
```

The screenshot shows a SQL query editor with the following details:

- Query text:

```
1 SELECT complaint_id
2 From complaint
3 where complaint_level = 'High';
```
- Results tab selected.
- Result table header: COMPLAINT\_ID
- Result data:

COMPLAINT_ID
CMP010
CMP004
CMP007
CMP001

-Display all columns from the Complaint that its status is Closed

```
SELECT *
FROM Complaint
WHERE Status = 'Closed';
```

The screenshot shows a SQL query editor with the following details:

- Query text:

```
1 Select *
2 From Complaint
3 Where Status = 'Closed';
4
```
- Results tab selected.
- Result table header: COMPLAINT\_ID, COMPLAINT\_TEXT, COMPLAINT\_TYPE, COMPLAINT\_LEVEL, COMPLAINT\_DATE, ASSIGN\_TO, STATUS, SOLVED\_DATE, REQUESTER, ASSIGN\_BY, LOCATION\_ID
- Result data:

# 6

## List employees with their average performance ranking

```
SELECT Employee_ID, Job_position, AVG(Rank) AS Average_Rank  
FROM Employee  
GROUP BY Employee_ID, Job_position;
```

The screenshot shows the Oracle APEX SQL Workshop interface. The top navigation bar includes links for APEX, App Builder, SQL Workshop, Team Development, and Gallery. On the right, there's a user profile for 'sultanah alsubae' with the schema 'WKSP\_SULTANAH223'. The main area is titled 'SQL Commands' with a search bar and a 'Run' button. Below the command input, there are tabs for Results, Explain, Describe, Saved SQL, and History. The results table has columns: EMPLOYEE\_ID, JOB\_POSITION, and AVERAGE\_RANK. The data shows four rows: Employee ID 1132593980 is an assistant with an average rank of 2; Employee ID 1157597780 is an assistant with an average rank of 1; Employee ID 1109393180 is a manager with an average rank of 3; and Employee ID 1109222100 is a manager with an average rank of 2.

EMPLOYEE_ID	JOB_POSITION	AVERAGE_RANK
1132593980	assistant	2
1157597780	assistant	1
1109393180	manager	3
1109222100	manager	2

# 7

## Retrieve the User\_ID and Complaint\_ID, linking the Users and Complaint tables based on the User\_ID and the Requester

```
SELECT Users.User_ID, Complaint.Complaint_ID  
FROM Users  
RIGHT JOIN Complaint ON Users.User_ID = Complaint.Requester;
```

The screenshot shows the Oracle APEX SQL Workshop interface. The top navigation bar includes links for APEX, App Builder, SQL Workshop, Team Development, and Gallery. On the right, there's a user profile for 'sultanah223' with the schema 'WKSP\_SULTANAH223'. The main area is titled 'SQL Commands' with a search bar and a 'Run' button. Below the command input, there are tabs for Results, Explain, Describe, Saved SQL, and History. The results table has columns: USER\_ID and COMPLAINT\_ID. The data shows ten rows of paired IDs, indicating which user made which complaint.

USER_ID	COMPLAINT_ID
2214492630	CMP010
2207104210	CMP004
2204382230	CMP007
2204103410	CMP001
2204452930	CMP009

2204552630	CMP008

8

### Retrieve the Complaint ID and Location Type

```
SELECT Complaint_ID, Location_Type
FROM Complaint
LEFT JOIN Location ON Complaint.Location_ID =
Location.Location_ID;
```

The screenshot shows a SQL developer interface with the following details:

- Toolbar:** Language (SQL), Rows (10), Clear Command, Find Tables, Save, Run.
- Query Editor:** Contains the following SQL code:

```
1 SELECT Complaint_ID, Location_Type
2 FROM Complaint
3 LEFT JOIN Location ON Complaint.Location_ID = Location.Location_ID;
```
- Results Tab:** Displays a table with two columns: COMPLAINT\_ID and LOCATION\_TYPE. The data is as follows:

COMPLAINT_ID	LOCATION_TYPE
CMP003	meetingRoom
CMP005	student lounge
CMP009	gym
CMP002	computer labs
CMP006	offices
CMP007	architecture room
CMP008	pool
CMP010	court
CMP001	classroom
CMP004	labrarv

9

List all the users and the complaint ID. If the user has not registered any complaint, the user id and name should still be displayed :

```
SELECT user_id, f_name, l_name, complaint_id
from USERS left join COMPLAINT on user_id = REQUESTER
order by user_id
```

↑ SQL Commands Schema WKSP\_SULTANAH223

Language SQL Rows 10 Clear Command Find Tables Save Run

```
1 SELECT user_id, f_name, l_name, complaint_id
2 from USERS left join COMPLAINT on user_id = REQUESTER
3 order by user_id
4
5
```

Results Explain Describe Saved SQL History

## 2- Advanced queries

### 1- Show the employee that manage CHS department

```
select *  
from users  
where user_id in (select managed_by  
from department  
where Department_Name = 'CHS Department')
```

The screenshot shows the Oracle APEX SQL Commands interface. The query is:

```
36  from department  
37 where Department_Name = 'CHS Department'  
38 )  
39
```

The results table has columns: USER\_ID, EMAIL, PASSWORD, PHONE, F\_NAME, L\_NAME. One row is returned:

USER_ID	EMAIL	PASSWORD	PHONE	F_NAME	L_NAME
1109393180	1109393180@psu.edu.sa	lt631949	0519271624	Shahad	Yusuf

1 rows returned in 0.02 seconds [Download](#)

### 2- Show the user id , complaint type, and student majors

```
SELECT u.user_id, c.complaint_type, s.student_major  
FROM USERS u  
JOIN COMPLAINT c ON u.user_id = c.REQUESTER  
JOIN STUDENT s ON u.user_id = s.student_id  
order by user_id
```

The screenshot shows the Oracle APEX SQL Commands interface. The query is:

```
1 SELECT user_id, f_name, l_name, complaint_id  
2 from USERS right join COMPLAINT on user_id = REQUESTER  
3 order by user_id
```

The results table has columns: USER\_ID, F\_NAME, L\_NAME, COMPLAINT\_ID. Four rows are returned:

USER_ID	F_NAME	L_NAME	COMPLAINT_ID
2201104230	Lina	Jamal	CMP005
2201303230	Noor	Abdullah	CMP006
2204103410	Dana	Amri	CMP001
2204382230	Jomana	Marwan	CMP007

### 3-Retrieve the complaint id assigned to the IT Department

```
SELECT Complaint_id  
FROM Complaint  
WHERE Assign_to IN (SELECT Department_ID FROM Department WHERE  
Department_Name = 'IT Department');
```

A screenshot of a SQL query results table. The table has three columns: COMPLAINT\_ID, COMPLAINT\_LEVEL, and COMPLAINT\_TYPE. The single row contains the values CMP001, High, and Technical respectively. Below the table, it says "1 rows returned in 0.01 seconds".

COMPLAINT_ID	COMPLAINT_LEVEL	COMPLAINT_TYPE
CMP001	High	Technical

1 rows returned in 0.01 seconds [Download](#)

### 4- Display the Complaint id for complaints related to classrooms

```
SELECT Complaint_id  
FROM Complaint  
WHERE Location_ID = (SELECT Location_ID FROM Location WHERE  
Location_type = 'classroom');
```

A screenshot of a SQL query results table. The table has a single column labeled COMPLAINT\_ID. It contains the value CMP001. Below the table, it says "1 rows returned in 0.01 seconds".

COMPLAINT_ID
CMP001

### 5- Retrieve the complaint id with a satisfaction rate greater than 4

```
SELECT Complaint_ID  
FROM Complaint  
WHERE Complaint_ID IN (SELECT Complaint_ID FROM  
SatisfactionRate_FillOut WHERE Satisfaction_Rate > '4');
```

A screenshot of a SQL query results table. The table has a single column labeled COMPLAINT\_ID. It contains six rows with values CMP001, CMP003, CMP005, CMP008, CMP006, and CMP009. Below the table, it says "6 rows returned in 0.02 seconds".

COMPLAINT_ID
CMP001
CMP003
CMP005
CMP008
CMP006
CMP009

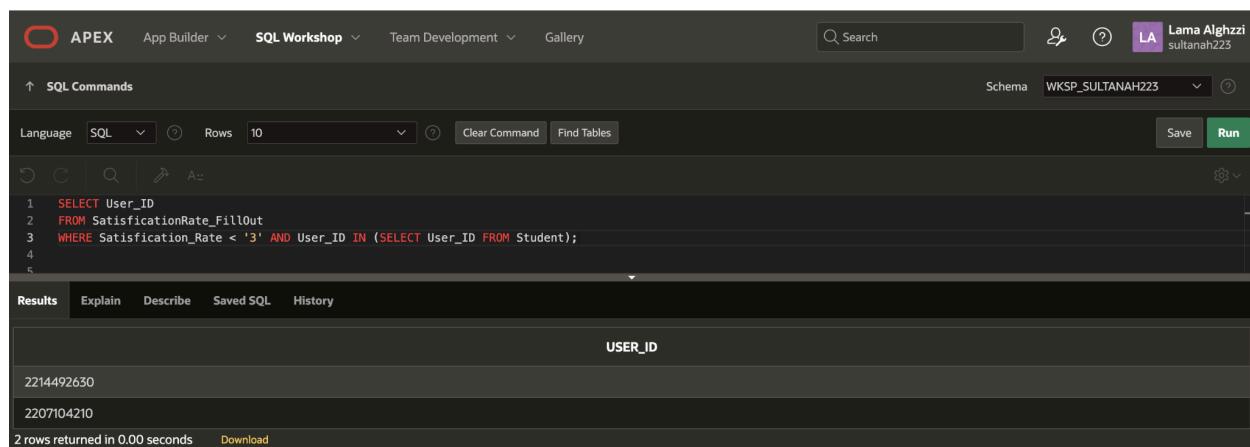

6 rows returned in 0.02 seconds [Download](#)

**6- Display the student id for students who have filled out a satisfaction rating of less than 3**

```
SELECT User_ID  
FROM SatisficationRate_FillOut  
WHERE Satisfication_Rate < '3' AND User_ID IN (SELECT student_ID  
FROM Student);
```

Or

```
SELECT User_ID  
FROM SatisficationRate_FillOut  
WHERE Satisfication_Rate < '3' AND User_ID IN (SELECT user_ID  
FROM Student);
```

The screenshot shows the Oracle SQL Workshop interface. The top navigation bar includes 'APEX', 'App Builder', 'SQL Workshop', 'Team Development', and 'Gallery'. On the right, there's a search bar, a user icon for 'Lama Alghzzi sultanhah223', and a 'Run' button. The main area is titled 'SQL Commands'. It shows a code editor with the following SQL query:

```
1 SELECT User_ID  
2 FROM SatisficationRate_FillOut  
3 WHERE Satisfication_Rate < '3' AND User_ID IN (SELECT User_ID FROM Student);  
4  
5
```

Below the code editor, there are tabs for 'Results', 'Explain', 'Describe', 'Saved SQL', and 'History'. The 'Results' tab is selected, displaying a table with one column 'USER\_ID'. The data rows are:

USER_ID
2214492630
2207104210

At the bottom of the results pane, it says '2 rows returned in 0.00 seconds' and has a 'Download' link.

**7- Show the Satisfaction Rate and complaint id for the complaint id 003 but not complaint id 001 using MINUS**

```
SELECT Satisfication_Rate , complaint_id  
FROM SatisficationRate_FillOut NATURAL JOIN complaint  
WHERE complaint_id = 'CMP003'  
MINUS  
SELECT Satisfication_Rate, complaint_id  
FROM SatisficationRate_FillOut NATURAL JOIN complaint  
WHERE complaint_id = 'CMP001'
```

The screenshot shows the Oracle APEX SQL Workshop interface. The schema is set to 'WKSP\_SULTANAH223'. The query window contains the following SQL code:

```

1  SELECT Satisfaction_Rate , complaint_id
2  FROM SatisfactionRate_Fillout NATURAL JOIN complaint
3  WHERE complaint_id = 'CMP003'
4  MINUS
5  SELECT Satisfaction_Rate, complaint_id
6  FROM SatisfactionRate_Fillout NATURAL JOIN complaint
7  WHERE complaint_id = 'CMP001'

```

The results table has two columns: 'SATISFACTION\_RATE' and 'COMPLAINT\_ID'. It shows one row with a satisfaction rate of 5/5 for complaint ID CMP003.

SATISFACTION_RATE	COMPLAINT_ID
5/5	CMP003

1 rows returned in 0.00 seconds [Download](#)

## 8-- Retrieve all the users who have complaints.

```

SELECT user_id , F_name, L_name
FROM users
WHERE EXISTS
( SELECT * FROM complaint WHERE REQUESTER = user_id);

```

The screenshot shows the Oracle APEX SQL Workshop interface. The schema is set to 'WKSP\_SULTANAH223'. The query window contains the following SQL code:

```

1  SELECT user_id , F_name, L_name
2  FROM users
3  WHERE EXISTS
4  | ( SELECT * FROM complaint WHERE REQUESTER = user_id);
5

```

The results table has three columns: 'USER\_ID', 'F\_NAME', and 'L\_NAME'. It lists four users: Lina, Jamal, Noor, Abduallah, Dana, Amri, and Marwan.

USER_ID	F_NAME	L_NAME
2201104230	Lina	Jamal
2201303230	Noor	Abduallah
2204103410	Dana	Amri
2204202220	Marwan

## 9- Retrieve Location, Complaint, and Department IDs using three joins:

```
SELECT Location_ID, Complaint_ID, Department_ID
FROM   (SELECT Complaint.Location_ID, Complaint.Complaint_ID,
Department.Department_ID
FROM Complaint
JOIN Location ON Complaint.Location_ID = Location.Location_ID
JOIN Department ON Complaint.Assign_to = Department.Department_ID)
```

The screenshot shows a SQL query editor interface with the following details:

- Language:** SQL
- Rows:** 10
- Buttons:** Save, Run, Clear Command, Find Tables
- SQL Query (Line Numbers):**

```
1 SELECT Location_ID, Complaint_ID, Department_ID
2 FROM (
3   SELECT Complaint.Location_ID, Complaint.Complaint_ID, Department.Department_ID
4   FROM Complaint
5   JOIN Location ON Complaint.Location_ID = Location.Location_ID
6   JOIN Department ON Complaint.Assign_to = Department.Department_ID)
```
- Results Tab:** The tab is selected and shows the query results in a table format.
- Table Headers:** LOCATION\_ID, COMPLAINT\_ID, DEPARTMENT\_ID
- Table Data:**

LOCATION_ID	COMPLAINT_ID	DEPARTMENT_ID
LOC010	CMP010	DEP010
LOC004	CMP004	DEP004
LOC007	CMP007	DEP007
LOC001	CMP001	DEP002
LOC009	CMP009	DEP009
LOC003	CMP003	DEP003
LOC002	CMP002	DEP001
LOC005	CMP005	DEP005
LOC006	CMP006	DEP006
LOC008	CMP008	DEP008

**10- Find the users that they are employees**

```
SELECT User_ID  
FROM Users  
INTERSECT  
SELECT User_ID  
FROM Employee;
```

The screenshot shows the Oracle SQL Workshop interface. The top navigation bar includes APEX, App Builder, SQL Workshop (selected), Team Development, and Gallery. A search bar and various icons are also present. The main area is titled "SQL Commands" and shows the following SQL code:

```
1 SELECT User_ID  
2 FROM Users  
3 INTERSECT  
4 SELECT Employee_ID  
5 FROM Employee;
```

The "Results" tab is selected, displaying a table with a single column "USER\_ID" containing ten rows of user IDs:

USER_ID
1109222100
1109393180
115566780
1118242100
1122566980
1132593980
1143879420
1157597780
1158849120
1159599980

## 11- Find students who are not employees

```
SELECT *
FROM Student s
WHERE s.STUDENT_ID NOT IN (
    SELECT e.Employee_ID
    FROM Employee e
    WHERE e.Employee_ID = s.STUDENT_ID);
```

The screenshot shows the Oracle APEX SQL Workshop interface. The top navigation bar includes links for APEX, App Builder, SQL Workshop, Team Development, and Gallery, along with a search bar and user profile icons. The SQL Workshop tab is active.

In the SQL Commands section, the schema is set to WKSP\_SULTANAH223. The code entered is the query from the previous step:

```
1 SELECT *
2 FROM Student s
3 WHERE s.STUDENT_ID NOT IN (
4     SELECT e.Employee_ID
5     FROM Employee e
6     WHERE e.Employee_ID = s.STUDENT_ID
7 );
```

The Results section displays the output of the query:

STUDENT_ID	ACADEMIC_LEVEL	STUDENT_MAJOR
2204103410	Junior	Computer Science
2205103410	Sophomore	Computer Science
2208103210	Junior	Software engineering
2207104210	Sophomore	Software engineering
2204382230	Freshman	Information systems
2204552630	Junior	Finance
2204452930	Senior	Finance
2214492630	Sophomore	Marketing
2201303230	Junior	Internal Design

At the bottom, there are footer links for cs340\_project12, sultanh223, en, and Oracle APEX 23.2.1.
